

Making it easy to get paid for Electricity, Water and Gas .

Let your customers pay for
electricity, water and gas
before use using Nectar
prepaid meters and tokens.

No need to chase after payment, read
meters or disconnect customers.

Dial *384*7351# (Safaricom)
<https://app.nectar.software>

Zero set up cost

Simply install the prepaid meters and
begin immediately generate tokens.

MPESA Integration

Customers can pay for your service
using MPESA and payments are sent
to your bank or MPESA account.

Tariff Management

Configure additional charges monthly
or per token.

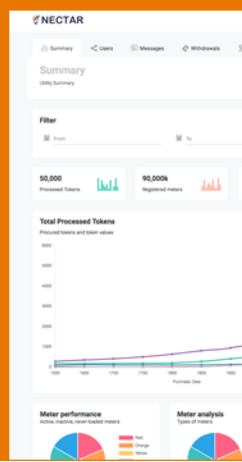

Nectar provides electricity, water and gas
prepaid meters and an *STS certified token
generation system accessible via the web
and USSD.

NECTAR
Enterprise Token Generator

1

Service provider signs up

Micro-grids, utilities, residential and commercial building managers sign up in Nectar© providing their contact information, the type of tokens they wish to vend, tariff rate and number of Nectar© IEC 62055-41 prepayment meters desired. A unique identifier is created and must be shared with the respective customers.

2

Customers sign up

Using the respective unique identifier, customers sign up in Nectar© and add meters, payment types and profile information.

How Nectar Works

3

Customers schedule token generation

Customers schedule when tokens will be generated. Tokens can be scheduled for immediate generation or in weekly, biweekly, monthly, 6 month or custom intervals. The payment mode is debited automatically on token generation.

4

Service provider monitors token generation

Using their credentials, the property managers logs in to Nectar© to monitor their registered users, transactions log, number of vended tokens and to transfer generated funds into their configured account.
